OPEN TREK

— End-to-end Development Platform for Enterprise Agents —

Find Product Details

Overview

OpenTrek is an end-to-end agent development platform that empowers enterprise developers to build across data, development, deployment, and operations. It provides agent development, runtime, operations, model training and inference, along with the gateway and execution environment.

Capabilities

Efficient Development

Build agents your way, no-code, low-code, or pro-code, and ship to production in days on one platform that unifies AI assets, including skills, knowledge bases and memory.

High Quality Knowledge

Transform enterprise data into high-quality knowledge base easily with prebuilt multimodal templates.

Security and Compliance

Prevent leakage and maintain full auditability with the combined capabilities of agent sandbox isolation, unified credential management, and multimodal guardrails.

Reliable in Production

Orchestrate multi-agent systems with end-to-end observability and response SLAs in minutes that increase operation efficiency up to 30%*.

*Measured under controlled benchmarking conditions. Results may vary depending on model, data, and use case.
