Alibaba Cloud ApsaraDB for RDS (Relational Database Service) is an on-demand database service that frees you up from the administrative task of managing a database. RDS handles routine database tasks such as provisioning, patch up, backup, recovery, failure detection and repair.

ApsaraDB for RDS also protects against network attacks and intercept SQL injections, brute force attacks and other types of database attacks.

Benefits & Features

Highly Available

- Guarantees up to 99.9% of business availability.
- Provides automatic failover in case primary instances are not available, offering remote and local disaster recovery.
- Ensures reliability with automated backups, snapshots and automatic host replacement.

Easy-to-Use

- Provides real-time monitoring and instance alerts.
- Easy-to-use dashboards allow you to schedule inspections and customize metrics.

Scalable

- Supports up to 20,000 IOPS and 2TB storage for each instance.
- Supports read-only instances with expandable read capacity using ApsaraDB for RDS for MySQL database.

Secure

- Protects against network attacks.
- Provides real-time monitoring of traffic at network entry level.
- Intercepts SQL injection, brute force attacks and other types of database attacks.
- Provides second level data recovery in the case of system failures.

Customers

e-Chauffeur

The real-time data read/write capabilities and elastic computing services of Alibaba Cloud has enhanced customer experience and reduced operation and maintenance costs.

Tianhong Asset Management

Clearance work that once took eight hours can now be completed in just 30 minutes at a fraction of the cost.
