

# Machine Learning Platform for AI

An end-to-end platform that provides various machine learning algorithms to meet your data mining and analysis requirements.

Overview

Documentation 

Machine Learning Platform For AI provides end-to-end machine learning services, including data processing, feature engineering, model training, model prediction, and model evaluation. Machine Learning Platform For AI combines all of these services to make AI more accessible than ever.

## Benefits

-  **Visualized Interface**  
Provides a visualized web interface allowing you to create experiments with drag and drop features.
-  **End-to-end Solution**  
Create a complete workflow for enterprise-level machine learning data modeling and applications.
-  **Myriad Algorithms**  
More than one hundred algorithm components cover scenarios such as regression, classification, clustering, text analysis, finance, and time series.
-  **Powerful Computing Capability**  
Handle a large number of concurrent algorithm computing tasks.

## Customer Scenarios

- Product Recommendation**  
Discover the features that influence shopping behaviour and provide customer recommendations that increase product sales.
- Financial Risk Management**  
Calculate the capability of clients to settle their credit card debt. Risk indexes help financial institutions manage risks effectively.
- News Classification**  
Text analysis components automatically classify documents in a short period of time.

Data Processing

Data Mining and Analysis

NLP (Natural Language Processing)

Established in September 2009, Alibaba Cloud is the cloud computing arm of Alibaba Group and develops highly scalable platforms for cloud computing and data management.
